SMAN 1 Kinali has a scholarship program that is distributed to underprivileged students and students who excel at school. However, the process of selecting prospective students who will be awarded scholarships is still done manually which is only based on observations from several teachers who know the student, which causes the scholarship not to be distributed to the right person.

Therefore, the design of a system that can support the principal in making decisions about students who are eligible for scholarships needs to be made. So that the scholarship can be distributed to the right person.
