

ABSTRACT

Thesis Title	: DESIGN AND BUILDING OF AN AUTOMATION SYSTEM FOR AL-QUR'AN READING ROOM IN TAHFIDZ QUR'AN'S HOUSE USING ARDUINO MEGA 2560
Student Name	: Andika Noviarwan
Student Number	: 19101152620099
Study Program	: Computer Engineering.
Degree Granted	: Strata 1 (S1)
Advisors	: 1. Ruri Hartika Zein, S.Kom., M.Kom 2. Rasmita, S.Pd.I.M.Pd

Memorizing the Qur'an is becoming an increasingly popular activity nowadays, supported by various facilities such as Qur'an houses, tahfizh houses, and tahfizhul Qur'an programs in schools, especially Primary Schools/Madrasah Ibtidaiyah. Many schools make tahfizhul Qur'an programs their flagship, showing the importance of memorizing the Qur'an. There are more and more supporting facilities for Qur'an tahfidz.

The Al-Qur'an reading room is one of the important facilities in education, requiring adequate lighting and air conditioning for a comfortable learning process. However, there are still many Al-Qur'an reading rooms that use manual locks and manual electrical systems. This causes inconvenience to the user and wastes electrical energy. Therefore, the Al-Qur'an reading room designed in this research is equipped with ultrasonic sensors to detect the presence of people, as well as servo motors to open the door automatically.

Keywords: *Al-Qur'an Reading Room, Automation System, Arduino Mega 2560.*

ABSTRAK

Judul Skripsi	: RANCANG BANGUN SISTEM OTOMATISASI RUANG BACA AL-QUR'AN PADA RUMAH TAHFIDZ QUR'AN MENGGUNAKAN ARDUINO MEGA 2560
Nama	: Andika Noviarwan
No. BP	: 19101152620099
Program Studi	: Sistem Komputer.
Jenjang Pendidikan	: Strata 1 (S1)
Pembimbing	: 1. Ruri Hartika Zain, S.Kom., M.Kom 2. Rasmita, S.Pd.I.M.Pd

Menghafal Al-Qur'an menjadi kegiatan yang semakin populer di zaman ini, didukung oleh berbagai fasilitas seperti rumah Qur'an, rumah tahfizh, dan program tahfizhul Qur'an di sekolah-sekolah, terutama Sekolah Dasar/Madrasah Ibtidaiyah. Banyak sekolah menjadikan program tahfizhul Qur'an sebagai unggulan, menunjukkan pentingnya menghafal Al-Qur'an. Fasilitas-fasilitas pendukung untuk para tahfidz Qur'an semakin banyak.

Ruang baca Al-Qur'an menjadi salah satu sarana penting dalam pendidikan, memerlukan pencahayaan yang memadai dan pendingin ruangan untuk kenyamanan proses belajar. Namun, masih banyak ruang baca Al-Qur'an yang menggunakan kunci manual dan sistem listrik manual. Ini menyebabkan ketidaknyamanan bagi pengguna dan pemborosan energi listrik. Oleh karena itu, ruang baca Al-Qur'an yang dirancang dalam penelitian ini dilengkapi dengan sensor ultrasonik untuk mendeteksi kehadiran orang, serta motor servo untuk membuka pintu secara otomatis.

Kata Kunci : Ruang Baca Al-Qur'an, Sistem Otomatisasi, Arduino Mega 2560.
