

ABSTRAK

HUBUNGAN ANTARA *PEER ATTACHMENT* DENGAN *SCHOOL CONNECTEDNESS* PADA SISWA KELAS XII DI SMA 1 LEMBAH MELINTANG

Penelitian ini bertujuan untuk mengetahui secara empirik hubungan antara *peer attachment* dengan *school connectedness* pada siswa kelas XII di SMA 1 Lembah Melintang. Variabel bebas dalam penelitian ini adalah *peer attachment* dan variabel terikat adalah *school connectedness*. Alat ukur yang digunakan dalam penelitian ini adalah skala *peer attachment* dengan skala *school connectedness*. Teknik pemilihan sampel dalam penelitian ini adalah teknik *simple random sampling*. Sampel dalam penelitian ini adalah 155 siswa kelas XII di SMA 1 Lembah Melintang. Uji validitas dan reliabilitas pada penelitian ini menggunakan teknik *alpha cronbach*. Hasil koefisien validitas pada skala *peer attachment* berkisar antara 0,320 sampai dengan 0,760. Hasil koefisien validitas pada skala *school connectedness* berkisar antara 0,359 sampai dengan 0,700. Dengan koefisien reliabilitas *peer attachment* sebesar 0.880 dan pada skala *school connectedness* sebesar 0.908. Berdasarkan analisis data, diperoleh nilai korelasi antara *peer attachment* dengan *school connectedness* sebesar $r = 0,420$ dengan taraf signifikan $p = 0.000$ yang berarti hipotesis diterima artinya terdapat hubungan yang sedang dan sangat signifikan antara *peer attachment* dengan *school connectedness* pada siswa kelas XII di SMA 1 Lembah Melintang, arah positif, artinya semakin tinggi *peer attachment* maka semakin tinggi *school connectedness* dan sebaliknya semakin rendah *peer attachment* maka semakin rendah *school connectedness*.

Kata Kunci: *peer attachment, school connectedness, siswa, SMA N 1 Lembah Melintang, korelasi.*

ABSTRACT

THE RELATIONSHIP BETWEEN PEER ATTACHMENT AND SCHOOL CONNECTEDNESS IN CLASS XII STUDENTS IN SMA 1 CROSS VALLEY

This research aims to determine the relationship between peer attachment and school connectedness in class XII students at SMA 1 Lembah Melintang. The independent variable in this research is peer attachment and the dependent variable is school connectedness. The measuring instrument used in this research is the peer attachment scale with the school connectedness scale. The sample selection technique in this research is a simple random sampling technique. The sample in this study was 155 class XII students at SMA 1 Lembah Melintang. Validity and reliability testing in this research used the Cronbach's alpha technique. The results of the validity coefficient on the peer attachment scale ranged from 0.320 to 0.760. The results of the validity coefficient on the school connectedness scale ranged from 0.359 to 0.700. With a peer attachment reliability coefficient of 0.880 and a school connectedness scale of 0.908. Based on data analysis, the correlation value between peer attachment and school connectedness is $r = 0.420$ with a significance level of $p = 0.000$, which means the hypothesis is accepted, meaning there is a moderate and very significant relationship between peer attachment and school connectedness in class XII students at SMA 1 Lembah Melintang. , positive direction, meaning that the higher the peer attachment, the higher the school connectedness and vice versa, the lower the peer attachment, the lower the school connectedness

Keywords: *peer attachment, school connectedness, students, SMA N 1 Lembah Melintang, correlation.*
