ABSTRACT

Desy Nurhayati, 2020, **relationship between social perception and social behavior of class student Students of SMK N 9 Padang, Counseling Guidance Education, University of Putra Indonesia "YPTK" Padang.**

This study aims to determine the relationship between social perceptions and social behavior of class X SMK Negeri 9 Padang year 2019/2020. The study population numbered 413 people registered in the 2019/2020 school year, with a sample of 203 people who took using propotional random sampling techniques. The method used in this research is quatitative.this study examines the relationship between social perceptions and social behavior. Quantitative research is a systematic scientific study of charts and phenomena and correlations. The instruments used in data collection in this study was a questionnaire arranged according to the *Likert Scale Model.* Data analysis was performed using a statistical program on the *IBM Statistical 21 and Microsoft Excel Computers.*

Based on the results of the hypothesis the r_{count} is equal to0.326, while the r_{count} of r_{table} is 0.138, because r_{count} is greater than the r_{count} of r_{table} (-0.326>0.138.) then there is a relationship between social perception with social behavior.

Keywords : Social perception, social behavior
