A. Background

In response to the increasing research and issues on the field of environment and technology in Southeast Asia, Universitas Lancang Kuning, Indonesia in collaboration with Universiti Teknologi Malaysia and Universitas Kebangsaan Malaysia will conducting International Conference on Environment and Technologies (ICE-Tech 2017) focusing on theme “*Advancing Technology for Sustainable Environment*”. This Conference provides a chance for academic and industry professionals to discuss recent progress in the area of Environment and Technology. We expect that the conference and its publications will be a trigger for further related research and technology improvements in this important subject.

ICE-Tech 2017 will be the most comprehensive conference focused on the various aspects of advances in Interdisciplinary of Environment and Technologies. The conference will take place in Pekanbaru, Indonesia, on 25-26 July 2017.

B. Scope and Themes

ICE-Tech 2017 will be the most comprehensive conference focused on the various aspects of advances Interdisciplinary on Environment and Technology. It will cover vital issues in Environment and Technology under multiple sub-themes such as Agriculture, Forestry, Computer Sciences and, Engineering

AGRICULTURE: Agribusiness, (off-on farm) , Agricultural Institutional, Agricultural Policy, Sustainable Agriculture, Organic Agricultural, Agricultural Technology, Marketing of Agriculture, Agricultural Extension and Communication, Agro industry

FORESTRY: Forest Management, Forest and Climate Change, Forest Bio-diversity, Ecosystem Service and Conservation, Silviculture and Agroforestry, Forestry and Environmental technology, Forest biotechnology and tree improvement

COMPUTER SCIENCES: Artificial intelligence, Digital Humanities, Computer Vision, Robotic, Mobile Application, Network Security, E-Government, E-Commerce, Data-mining, Geography Information system, Cloud and Grid Computing, Bio Informatika, Decision, Support System

ENGINEERING: Architectural Studies, Sustainable Architecture, Architecture Urban Conservation, Environment-Friendly Construction and Development, Safety Management, Heritage Culture Tourism, Urban Planning, Building and Construction Technologies, Mechanical, Energy and Machine Engineering, Electronics, System and Statistics Engineering, Renewable Energy Technologies, Electric Drive and Energy Conversion, Information System and Management, Mechatronic, Robotic and Automation

More information : <http://icetech.unilak.ac.id/Tracks.htm>

C. Important Dates

DESCRIPTIONS	DEADLINES
Abstract Submission Duedate:	25 April 2017
Notification of Acceptance:	10 Mei 2017
Full Paper Submission:	10 June 2017
Conference Day:	25-26 July 2017

D. KEYNOTE SPEAKER

Prof. Dr. Imam Robandi (Institut Teknologi Sepuluh November, Indonesia)

Prof. Dr. Ekhwan Toriman (Universiti Kebangsaan Malaysia)

Prof. Dr. Mohz Wazir Muztafa (Universiti Teknologi Malaysia)

International Advisory Board

Prof. Dr. Joran (Linkoping University, Swedia)

Prof. Dr. Amran bin Hamzah (Universitas Teknologi Malaysia, Malaysia)

Prof. Dr. Khaerurijal (Institut Teknologi Bandung, Indonesia)

Prof. Dr. Asep Saefuddin (Institut Pertanian Bogor, Indonesia)

Prof. Dr. Mauridi (Institut Teknologi Sepuluh November, Indonesia)

Prof. Dr. Adi Soeprijanto (Institut Teknologi Sepuluh November, Indonesia)

Prof. Dr. Syafrani (Universitas Lancang Kuning, Indonesia)

Prof. Dr. Hariadi Kartodiharjo (Institut Pertanian Bogor, Indonesia)

Prof. Dr. Sumbangan Baja (Universitas Hasanuddin, Indonesia)

Prof. Wiendu Nuryanti Ph.D (Universitas Gajah Mada, Indonesia)

Prof. Dr. Chairul Saleh (Universitas Islam Indonesia, Indonesia)

Prof. Dr. Richardus Eko Indrajit (STMIK Perbanas, Indonesia)

-Scientific Committee:

- Assoc. Prof. Dr. Rila Mandala (Institut Teknologi Bogor, Indonesia)
- Assoc. Prof. Dr. Romi Satria Wahono (Universitas Dian Nuswantoro, Indonesia)
- Assoc. Prof. Dr. Phil. Arinafril (Universitas Sriwijaya, Indonesia)
- Assoc. Prof. Dr. Arachchilage Aruna Shanta (Sabaragamuwa University of Sri Lanka)
- Assoc. Prof. Dr. Abdurrahman Radin Haggi (Sultan Sharif Ali Islamic University, Brunei)
- Assoc. Prof. Dr. Dedi Zargustin (Universitas Lancang Kuning, Indonesia)
- Assoc. Prof. Dr. Hamzah (Universitas Lancang Kuning, Indonesia)

Rector Welcoming Remarks

It is our great pleasure to welcome you to the International Conference on Environment and Technologies (ICE-Tech 2017) which will be held during **July 25 to 27, 2016 in Pekanbaru, Indonesia** with the theme “*Advancing Technology for Sustainable Environment*”. This conference is jointly organized by Universitas Lancang Kuning, Indonesia, Universiti Kebangsaan Malaysia and Universiti Teknologi Malaysia

the International Conference ICE-Tech 2017 focusing on special topic in Environment and Technology with aims to bring together researchers, scientist, practitioners and scholar student to exchange and share their experiences, new ideas, and research result. Attending ICE-Tech 2017 means you also will experience Pekanbaru, a beautiful city renowned for its international flavor and inspiring diversity.

ICE-Tech 2017 will be an exceptional conference for sharing the latest academic insight as well as experiencing the unique culture of Malay Hospitality in Pekanbaru City. We hope you will join us for a symphony of outstanding science, and take a little extra time to enjoy the spectacular and unique beauty of this region. We thank you for your participation and look forward to seeing you in Pekanbaru, Indonesia.

With best wishes

Assoc. Prof. Dr. Hj. Hasnati, MH,

Abstract: Environmental solutions around the world today are making people dependent on technological developments. However, the technology cannot be separated from the community either in the form or its influence, therefore the pattern of behavior of society must also get arrangements for technology to occur as an acceleration of life done properly. This study aims to obtain patterns of community behavior on non-organic waste by using technology intervention. Gap exploration is essential for theoretical and experimental analysis of humans who dispose of unorganic and organic waste out of place. But the field of behavior analysis is uniquely tailored to contribute to this body of work. Sustainable development depends on changing technology to achieve its goals. We report on data collected from an on-line survey, which possible solutions for trash problems. In this paper we present an integrated waste management system with IT that we called I-BSC (Indonesia *Bersih* (Clean), *Sehat* (Healthy) and *Cerdas* (Smart)). This I-BSC is not only for deposit bottles and systems but the system aims also to create awareness of waste production and management, which serves as an educational platform in urban environments for further life innovation.

Keywords: Technology Intervention, cleanliness behavior, trash management, environmental psychology

1. Introduction

Indonesia is one country that has a very wide area in the world, the total area of Indonesia is 5.193.250 km² which includes land and sea [12,14]. It put Indonesia as the 7th largest country in the world after 6 other countries, namely Russia, Canada, USA, China, Brazil and Australia. Compared to the wide range of

countries in Asia, Indonesia is ranked 2nd. Meanwhile, when compared with countries in Southeast Asia, Indonesia is the largest country in Southeast Asia.

Meanwhile, based on the report from the United Nations Population Division on the prospect of the world population that estimates the population of the world by medium fertility method for July 1, 2015, Indonesia itself has a population of 255,708,785 people or 3.49% of the world population and occupies the fourth position in the world.

But for the pattern of people's behavior on waste, Indonesia is ranked second in the world of plastic waste to the sea which reached 187.2 million tons after China reached 262.9 million tons. Based on Jambeck data (2015) [13]

The data proves that the hygiene behavior of Indonesian people, especially on garbage is still not good. It can also be seen from the activities of citizens in everyday life, where although the government has tried to provide training as one strategy to provide information to all levels of society about the implementation of Reduce, Reuse, Recycle and Composting (R3C) in waste management or Recycle waste into products that have economic value [8] [9] [15] [16] [17]. Then the government has also appealed to households, shops and business establishments not to mix materials that can be recycled (unorganic) with organic decomposition by placing it in separate trash bins by providing trash cans Two containers. However, these efforts are still experiencing difficulties because there are still few people who are able to apply the R3C pattern in daily life and still lack of public awareness to separate organic and unorganic waste directly when disposing garbage.

The hygiene behavior that people do to waste, including environmentally responsible behaviors. Hines, Hungerford and Tomera (1986) conducted a meta-analysis of studies pertaining to environmentally responsible behavior, obtaining a number of variables associated with the intended behavior, knowledge of issues, knowledge of action strategies, locus of control, the verbal commitment and sense of responsibility one has. [3]

In this study the authors examine how the pattern of public hygiene behavior if influenced by technological intervention in everyday life. The technological intervention to be provided is a system that supports the government's efforts to create a clean and healthy environment that is "I-BSC System (*Indonesia Bersih Sehat dan Cerdas*)". The I-BSC system is an integrated system with technology and community empowerment and several other variables to manage plastic bottle waste, where every plastic bottle waste disposed of by the community on the I-BSC system will be rewarded with the value of dollars per each bottle so that people can enjoy Cash out system, in addition to the value of rupiah owned can be used to perform electronic transactions and of course will increase public awareness to sort out organic and unorganic waste directly.

2. Methodology

In accordance with the purpose of this study is to see how the pattern of public hygiene by applying technology to waste management [10] [11] [18] [19]. In this research, the form of waste management technology used the I-BSC system, then the approach used in this study is quantitative method, this method is called as a positivistic method because it is based on the philosophy of positivism. This method as a scientific or scientific method because it has met the scientific norms are concrete or empirical, objective, measurable, rational, and systematic. This method is also called discovery method, because with this method can be found and developed various new science and technology. This method is called quantitative method because the research data in the form of numbers and analysis using statistics. [4]

The location of the research was conducted at Putra Indonesia University "YPTK" Padang located in West Sumatera province, site selection was based on the consideration that: (1) This location is where the innovation of the I-BSC system originated; (2) there are variation of education level, occupation type and number of respondent's income which enables variation of community hygiene level with existence of I-

BSC system. The subjects of this study were students of Universitas Putra Indonesia "YPTK" Padang and the community residing in Putra Indonesia University "YPTK" Padang, where sampling technique used according to Krejcie and Morgan (1970) [21] with error rate 5% then the population is 500000 people with The number of samples was 384 respondents. Where the characteristics of students and community residing in the University of Putra Indonesia "YPTK" Padang from samples tested based on:

- Gender can be seen in figure 1
- The last education can be seen in figure 2
- Job type can be seen in Figure 3
- Total revenue can be seen in figure 4

Figure 1. Percentage of respondents by sex

Figure 2. Percentage of respondents by level of education

Figure 3. Percentage of respondents by type of work

Figure 4. Percentage of respondents by total revenue

The samples were collected by distributing questionnaires online, to find out how the behavior of people in the management of unorganic waste during this time.

In general, community behavior in the management of unorganic waste can be measured from the important components in showing a person's behavior in environmental management (Albert, 2009) [5] [7] [20]. Where the components underlying a person's behavior are related to the understanding of knowledge possessed about waste and waste management, how the habits or behaviors of unorganic waste generated from daily life, the impulse of the social environment and how the society's acceptance of technology.

- Knowledge of waste
- The level of public understanding about the waste based on data obtained is 78.41%.
- Community behavior on waste in daily life

Table 1. The results of respondents about community behavior on waste in daily life.

No	Behavior	Yes	No	Sometimes
1	Do you throw rubbish on public roads ?	0.7%	72.7 %	26.6%
2	Do you destroy garbage by burning it	27.3%	31.8%	40.9%
3	Do you separate organic and unorganic waste bins ?	29.4%	39.6%	31%
4	Do you bring your own baskets while shopping at markets to reduce plastic waste?	18.8%	45.6%	35.7%
5	Do you throw out plastic bottles immediately?	41.9%	22.9%	35.2%
6	Do you bring your own bottle to reduce plastic waste?	46.4%	20.6%	32.8%
7	Do you reuse or recycle plastic bottle products?	18.2%	41.9%	39.8%
8	Do you collect waste plastic bottle for resale?	21.1%	50.3%	28.6%

1) The impulse of the social environment

Table 2. The result of respondent about influence of the social environment

No	Behavior	Yes	No	Sometimes
1	Have you ever flooded around your neighborhood ?	35.9%	45.8 %	18.2%
2	Whether floods happen every year in your residence?	17.4%	60.2%	22.4%
3	Whether in the PKK forum or your community have an independent waste management program or waste bank ?	22.7%	65.6%	11.7%
4	Have you ever been invited by other peoples in your residence to process plastic waste?	28.4%	56.6%	15.1%
5	Have you ever been invited by other peoples in your residence to recycle plastic waste?	30.2%	57.8%	12%
6	Has anyone offered a reward in the form of money or other things if your recycle your trash?	9.4%	83.3%	7.3%

2) The society's acceptance of technology.

After the implementation of the I-BSC system in daily life, the data collecting through the online questionnaire then analyzed to find out how big the influence of technology to the hygiene behavior of the students and the community around Universitas Putra Indonesia "YPTK" Padang. So obtained the results of acceptance of technology with research instruments that have Likert measurement scale with the

measurement scale used is 1 (very unattractive) 2 (not interesting) 3 (enough) 4 (interesting) 5 (very interesting). Measurement scale is an agreement used as a reference to determine the short length of intervals in the instrument (instrument) so that the measuring tool when used in the measurement will produce quantitative data [6]. The data analysis was done by using statistic by survey, based on the analysis, then the results obtained as shown in Figure 5 to Figure 13.

Figure 5. The level of respondent's satisfaction with the menu and facilities offered by the I-BSC system

Figure 6. Desire to support zero waste movement through I-BSC system

Figure 7. The existence of the I-BSC system is useful to improve understanding of waste, especially plastic bottle waste

Figure 8. The confidence of respondents to the I-BSC system which is a product of the domestic children who can compete with the outside products.

Figure 9. The I-BSC system facilitates the respondents in studying plastic waste waste

Figure 10. I-BSC Machine will be useful for waste management, especially plastic trash bottles

Figure 11. Respondents accessing I-BSC to find information on plastic bottle receptacle and information about buying and selling media bottles that have been processed

Figure 12. Respondents access the I-BSC system to learn waste plastic bottle management into creative goods.

Figure 13. The level of support of respondents to the I-BSC system as an innovative tool for the community in grind unorganic waste.

3. Conclusion and Recommendation

Based on the above analysis, it can be concluded as follows:

Table 3. Results of respondents to the I-BSC system

I-BSC System	Scale				
	1	2	3	4	5
The level of menu satisfaction and facilities	0.5 %	3.1 %	20.1%	41,4 %	34,9 %
Support zero waste movement	0.5 %	2.3 %	21.6 %	35.4 %	40.1 %
Increase understanding of bottled waste	1.0 %	1.0 %	9.4 %	34.1 %	54.4 %
Products that can compete	0 %	0.3 %	8.6 %	31.8 %	59.4 %

Makes it easy to learn plastic waste bottle processing	0 %	1.6 %	10.4 %	39.3 %	48.7 %
Useful for waste management	0 %	0.5%	6 %	36.5%	57%
Provide the media buying and selling of waste processing	1,3 %	1,8 %	19 %	41.9 %	35,9 %
Learning waste management to be creative	0.8 %	1.3 %	15.1 %	37.8 %	45.1 %
Innovative means	0.5 %	1.0 %	8.9 %	29.7 %	59.9 %

Based on Table 3, it can be concluded that respondents said accepting the presence of I-BSC systems, it can be seen from 48.37% of the respondents stated I-BSC system is a very interesting technology, where the system is able to give positive impact to the hygiene behavior of the community where the community is getting used to separating organic and inorganic waste directly, then people are also interested to utilize Facilities - facilities in the system I-BSC both cash out system, electronic transactions and media sales of plastic waste processing products as well as educational information presented by the I-BSC system.
