

## ***ABSTRACT***

*Laptop desks are one of the supporting facilities for students to study. Therefore it is very important in choosing a laptop table that is comfortable to use. In this research, the designer will design an ergonomic laptop desk that can help students to do their assignments using anthropometric and ergonomic concepts. From the results of the calculations that have been done, the ergonomic size of the laptop table is obtained, namely for measuring the table legs with a 50th percentile size, the table height is 52 cm, and for length and width measurements using the 10th percentile and the 50th percentile with sizes 59 cm and 42 cm.*
