Medical record is a file that contains records and documents about the identity of patients, the results of examination, treatment, action and other services received by patient in health facilities, and medication for outpatient or inpatient care. Medical record is used as a reference for the next examination, especially when the patient is treated again. Medical records of patients must be ready when the patient is treated again. Completeness of medical records file by the health officer will facilitate other health officer in providing the action or therapy to patients. It also can be used as a data source on the medical records in data management and will be useful information for the management to determine strategic steps for the development of health services.

JURUSAN : **SISTEM INFORMASI**

JENJANG PENDIDIKAN : **STRATA-1 (S1)**

PEMBIMBING : **1. GUSHELMI,S.Kom, M.Kom**
2. Liga Mayola, S.Kom,M.Kom.

Rekam medis adalah berkas yang berisikan catatan dan dokumen mengenai identitas pasien, hasil pemeriksaan, pengobatan, tindakan dan pelayanan lainnya yang diterima pasien pada sarana kesehatan, baik rawat jalan maupun rawat inap . Rekam medis digunakan sebagai acuan pasien selanjutnya,terutama pada saat pasien itu berobat kembali. Rekam medis pasien harus siap apabila pasien berobat kembali. Kelengkapan pengisian berkas rekam medis oleh tenaga medis kesehatan akan memudahkan tenaga kesehatan lain dalam memberikan tindakan atau terapi kepada pasien.
